

Portfolio Brief

Activity 12: Building Your Portfolio Blog by Prompting an AI Assistant | Portfolio Building B25CS0311

Who I am

I'm Nabhanuddin Safiri, a B.Tech student in Computer Science and Information Technology (CSIT) at REVA University, Bengaluru. I enrolled in September 2025. My GitHub username is **nabhan147** and my contact email is nabhanuddinsafiri@gmail.com.

Short bio

I'm a beginner developer who learns by building things and sharing them publicly. I prefer Python over C when I have a choice, though my coursework (C programming, digital electronics, statistics) uses both. Before this course I had never used Git or GitHub, so setting up a real workflow and getting my work online was a big step for me. I want visitors to see that I'm actively building skills, not just listing them.

What I built in Activities 1 to 4

- **Hello World repository (Activities 1 and 2).** I set up VS Code, installed Git, created my GitHub account and pushed my first repository, written in C. I learned the basic cycle of editing, committing and pushing, and what a repository actually is. Link: github.com/nabhan147/Hello-World
- **Pair-programming collaboration (Activity 3).** I used GitLens and Live Share to work on the same code at the same time as my partner, GitHub user mohanshenoy43-create. I learned how to see who changed which line and why, and how real-time collaboration differs from passing files back and forth.
- **LeetCode solutions repository (Activity 4).** I created a repository with 8 solved LeetCode problems in C, with a short note on the approach for each, so my progress is documented rather than just remembered. Link: github.com/nabhan147/Leetcode-Solutions

Additional practice. I also keep a HackerRank3rdSem repository with 5 solved HackerRank problems in Python, which shows my practice in the language I prefer. Link: github.com/nabhan147/HackerRank3rdSem

Skills

Python, C, Git and GitHub, VS Code (with GitLens and Live Share), basic data analysis, and problem solving through LeetCode and HackerRank practice.

Career and learning goal

Over the next year I want to grow my GitHub profile with real open-source contributions and apply to a student program such as GirlScript Summer of Code or GitHub Campus Experts. I also want to keep solving problems regularly, aiming to move from a handful of solutions to a steady, documented practice.

What I want the portfolio page to do

- Introduce me clearly in a short About section of no more than three sentences, including my branch and university.
- Show my work in a Projects section with the real repositories above, one line each, with working links.
- List my skills simply, without exaggerating or adding anything I haven't done.
- Make it easy to reach me through GitHub and email.
- Use a professional but approachable tone, with a clean dark navy and teal look that reads well on a phone.

The page must use only the information in this brief. Nothing should be invented, including projects, internships, statistics or links.
